

MTC

MOBILE QUICK TERMINAL CHANGER

Komax mobile system for changeover of two crimp tools and terminal reels in minimal time.

Fast, mobile changeover

MTC is a mobile quick-change system for crimp tools and terminal reels on the Alpha 530 and 550. The quick changeover is done by way of a 180° rotation and is finished in the blink of an eye. The crimp tool and the terminal reel are prepared on a stable trolley while the machine is still producing. The crimp tools are fixed with a quick clamping system of the type available for standard mini applicators or crimp tools from other manufacturers.

Versatile and robust

This space-saving system can be used directly at the machine or between the machine and the tool room as necessary. The robust design is perfect for rough production conditions. MTC is suitable for a wide variety of different crimp tools. The integrated protective tray on the floor of the trolley protects the crimp terminals from damage.

Technical data

Machines	Alpha 550 / Alpha 530
Max. reel diameter	640 mm
Max. reel width	100 mm
Tool length (distance from crimp anvil to end position)	135 mm
Terminal end monitoring	Integrated
Protective tray	Integrated
Material change detection for terminal reel	Optional

Your benefits

- **Fast changeover**
- **Tool preparation while the machine is in operation**
- **Mobile, stable and robust**
- **Tool preparation possible in the tool room**
- **Available for a wide variety of crimp tool types**
