

# STC

## STATIONARY QUICK TERMINAL CHANGER

**Komax innovative system for manual changeover of two crimp tools and terminal reels in minimal time.**

### Fast, stationary changeover

STC is the fastest changeover system for crimp tools and terminal reels on the Alpha 530 and 550. The quick changeover is done with a simple motion in just a few steps. The crimp tool and the terminal reel are prepared for the next job while the machine is still producing. The terminal reel is clamped in place with a newly developed mechanism that can be operated with one hand. The crimp tools are fixed with a quick clamping system which is available for standard mini applicators or crimp tools from other manufacturers.

### Compact and robust

The STC is firmly mounted on the fully automatic wire processing machine and requires little space. Because the system doesn't rest on the floor, it can be used for example with floor mats or cable ducts. The robust design is perfectly crafted for a rough production environment.

### Versatile

STC is suitable for a wide variety of different crimp tools. Thanks to the extra-long variant, crimp tools with oiler can also be set up as standard.

### Technical data

Machine	Alpha 550 / Alpha 530
Max. reel diameter	640 mm
Max. reel width	60 mm
Max. tool length (distance from crimp anvil to end position)	200 mm
Terminal end monitoring	Integrated
Variant for long crimp tools	Integrated
Protective tray	Optional
Material change detection for terminal reel	Optional

### Your benefits

- **Fastest possible changeover**
- **Tool preparation while the machine is in operation**
- **Firmly mounted on the machine**
- **Compact and ergonomic use**
- **Available for a wide variety of crimp tool types**
